柔軟な万能チャック

Flexible allrounder

優れた融通性

INOFlex® は、最新の工作機械におけるほとんどすべてのクランプ作業に適したフレキシブルなチャックです。ワークの形状、被削材、加工の種類にかかわらず、INOFlex® はあらゆるクランプの課題を解決します。4つの爪と特許取得の補正機構により、回転対象のワークや角材ワークも、中心から安全にクランプすることができます。特に、補正機能によりすべてのクランプポイントに常に同じクランプ力がかかるようになります。4つのジョーを90° ピッチで配置することで、さまざまな組み合わせが可能です。例えば、対向する2つのジョーを使ってセンタリングクランプを行うことができます。使用しない2つのジョーには特に何もせず、取り外されたままで問題ありません。したがって、2ジョーによるセンタリングクランプのために特別な準備は必要ありません。仮に明確な基準となる端面が必要な場合、4爪および2爪のセンタリングクランプの代わりに、最大2つの固定ストップを使用することができます。2つのクランプ軸はそれぞれ定義された基準を持ち、固定されたジョーによるクランピングと同等です。もちろん固定歯付きのジョーを使用すれば、実績あるスタンピング技術で部品をクランプして加工することも可能です。

THE SURPLUS OF FLEXIBILITY

INOFlex® is the flexible chuck which is suitable for almost every clamping task on modern machine tools. Regardless of the workpiece geometry, the material to be machined or the type of machining, INOFlex® is the solution for every clamping problem. The concept of the 4-jaw arrangement in combination with the patented compensation enables rotationally symmetrical as well as square workpieces to be clamped both centrally and safely. In particular, the compensation ensures that the same clamping force is applied at all clamping points at all times. The 4-jaw arrangement of the jaws in a 90° pitch results in a multitude of possible combinations. For example, 2 opposite jaws can be used for centring clamping. The two jaws that are not required simply remain unnoticed/dessembled. Therefore, no special preparation is necessary for the 2-jaw centring clamping. If a clear reference edge is required, up to 2 fixed stops can be used as an alternative to the compensating 4-jaw and 2-jaw centring clamping. Each of the two clamping axes has a defined reference and is comparable to a clamping with a fixed stationary jaw. By using jaws with holding teeth, components can of course also be clamped and machined using the proven stamping technology.

動作原理

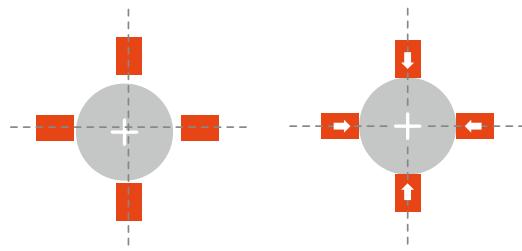

従来のチャックでは、全ての駆動部品(ウェッジバー、ウェッジフック、スクロールなど)は、センターを中心に同じ方向に動くか、中心から遠ざかるかのどちらかです。INOFlex®-4爪チャックの駆動部(同心円補正)は、平行な2軸上で向かう動きまたは離れる動きをします。この補正是、直徑方向に対向するスライドをレバーまたはスライドゲージ式ギアで接続することにより行われます。

この補正技術により、旋盤加工やフライス加工において、円形ワーク、四角いワーク、幾何学的に不規則なワークをクランプ装置/回転軸と同心円状に加工することができます。すべてのクランプポイントで、常に同じクランプ力が適用されます。

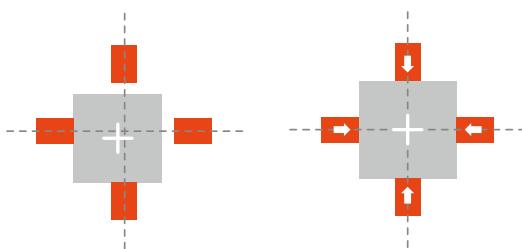

HOW IT WORKS

In a conventional chuck, all drive parts move in the same direction around the centre (e.g. wedge bar, wedge hook, scroll) either towards or away from the centre. The drive of the INOFlex® 4-jaw chuck (concentric compensation) moves towards or apart on two parallel axes. Compensation is provided by connecting the diametrically opposed slides with levers or a sliding gate-type gear.

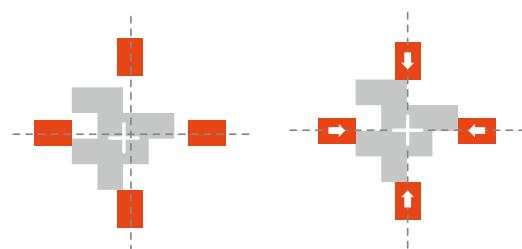

The compensating technology allows round, square and geometrically irregular workpieces to be machined concentric to the clamping device / rotary axis in turning and milling operations. The same clamping force is applied at all clamping points at all times.

INOFlex チャック用 機械固有の組付け部 Machine-specific connections for INOFlex[®] chucks

次のページでは、INOFlexチャックを機械スピンドルに接続するための標準的なアダプタープレートについてご紹介します。

市場で販売されている工作機械は、スピンドルの組合せ、ドローチューブのデザイン、最小/最大位置のバリエーションが豊富にあります。残念ながら、標準部品との接続は不可能な場合が多いです。

そのため、お客様の工作機械に合わせてカスタマイズされたソリューションを提供しています。図面には、既存のドローチューブやドローバーの位置と寸法、および設置されているクランプシリンダーの仕様も記載されています。

On the following pages you will find a range of standard adapter plates for connecting INOFlex[®] chucks to machine spindles. However, the machine tools available on the market offer a large variety of the combination of spindle nose, design of the draw tube and its min./max. position.

Unfortunately, a connection with standard components is often not possible. For this reason, we offer solutions customized to your machine tool, consisting of an adapter plate and, if necessary, a draw tube adaptation. For the constructive design we only need the drawing of the machine spindle from your machine documentation, which also shows the position and dimensions of the existing draw tube or draw bar as well as the specification of the installed clamping cylinder.

HWR モジュラー システム

THE HWR MODULAR SYSTEM

物事をシンプルにするという哲学が、HWRモジュラーシステムにつながりました。私たちの目的は、カタログに基づいた標準的に注文できるクランプソリューションをお客様へ提供することです。コストばかりがかさみ、設計・製造に長い時間を要するような特別なソリューションは必要ないです。コンペンセイティング・クランプ・メカニズムのおかげで、私たちは今までにないモジュラー・システムをお客様に提供することができるのであります。

1 INOFlex® で同心円状に補正された丸いワークや四角いワークをクランプします。薄肉のワークでも、従来の3爪チャックより大幅に変形を抑えてクランプすることができます。

2 チューブ材や細いリング材は INOTop® を使えば、ほとんどクランプ圧をかけずにクランプして固定することができます。そのため、ワークを変形させることなくクランプすることができます。

3 INOFlex® と INOZet® クランプシステムを組合せた標準的な8点クランプは、私たちの知る限りでは世界で初めてのシステムです。補正クランプポイントの数が多いため、クランプ力が均一に作用し、ワークの変形を最小限に抑えることができます。

4 INOFlex® と INOZet®、INOTop® を組合わせた最大構成レベルでは、変形に敏感なワークが8つのクランプポイントで均等にセンタリングされ、固定ジョーによる内部クランプで歪みなくクランプされます。

The philosophy of making things simple was leading to the HWR modular system. It is our intention, to offer customers clamping solutions that are based on the catalogue and can be ordered as standard. No special solutions which are very cost-intensive and on the other hand they need a very long time until they are designed and manufactured. Thanks to the compensating clamping mechanism, we are in a position to offer our customers an unprecedented modular system.

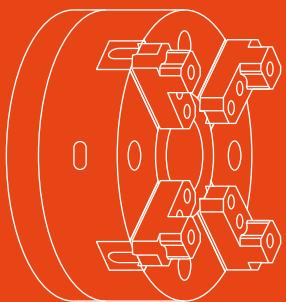

1 You clamp your workpieces, round or square, concentrically compensating with INOFlex®. Even thin-walled workpieces are clamped with significantly less deformation than in the conventional 3-jaw chuck.

2 Tubes and thin rings are fixed with INOTop® almost without clamping pressure but by clamping the wall thickness. Thus the workpieces are clamped without deformation.

3 To our knowledge, the INOFlex® in combination with the INOZet® clamping system is the first standard compensating 8-point clamping available worldwide. Due to the high number of compensating clamping points, the clamping forces act evenly and with minimal deformation on the workpiece.

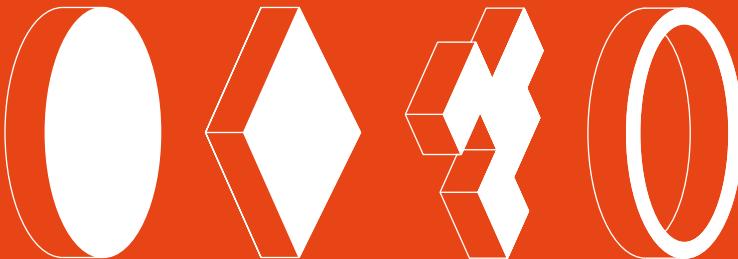

4 In the maximum configuration level of INOFlex® with INOZet® and INOTop®, the deformation-sensitive workpieces are centred equally by compensating 8 clamping points and are clamped distortion-free by the internal clamping with fixed stationary jaw.

Maximum flexibility

卓越したテクノロジー

革新的な INOZet® クランプシステムは 2010 年に一般に公開され、ハンブルグの NORTEC で NORTEC 賞を受賞しました。

それ以来、ユーザー数は継続的に増加しています。INOZet® クランプシステムは、変形に敏感な部品、丸くない部品、または熱処理によって変形した部品をクランプするときに特に重要な利点を提供します。

INOZet® により HWR は最先端テクノロジーを再定義しました。既存の 3 または 4 ジョーチャックは、すぐに補正機能付き 6 ジョーチャックまたは 8 ジョーチャックに変わります。振り込機構は、振り子ブリッジに補正効果を与え、低変異の 6 点クランプや 8 点クランプを可能にしました。クランプポイントを 2 倍にすることで、クランプ圧がワークに均一にかかるようになり、ポリゴン形成が大幅に減少します。

NORTEC AWARD

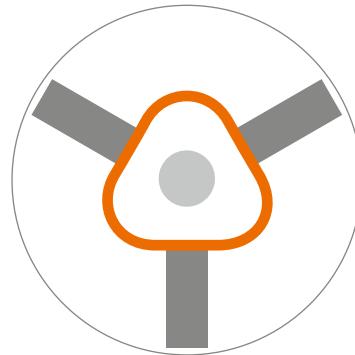

OUTSTANDING TECHNOLOGY

The innovative INOZet® clamping system was presented to the public in 2010 and honoured with the NORTEC Award at the Nortec in Hamburg.

Since then there has been a continuous increase in the number of users. The INOZet® clamping system offers crucial advantages particularly when clamping deformation-sensitive parts, out-of-round components or parts deformed by thermal treatment.

With INOZet®, HWR has redefined the state of the art in technology : an existing 3- or 4-jaw chuck is turned into a compensating 6- or 8-jaw chuck in next-to-no time. The pendulum mechanism gives the pendulum bridges a compensating effect, thus permitting low-deformation 6- or rather 8-point-clamping. Doubling the number of clamping points ensures that the clamping pressure is introduced more evenly into the workpiece, with a crucial reduction in polygon formation.

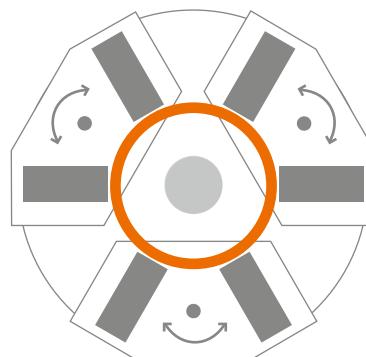

従来の3点クランプ
Conventional 3-point clamping

仕組み

振動システムにより、6つのジョーの下で補正を行なながら、中心でクランプすることができます。この補正により、すべてのクランプポイントが均等に、同じ力でワークと接触します。補正無しで3点を超えるクランプポイントを持つクランプシステムは、過剰なクランプ状況につながり、特に薄肉ワークが変形しやすい、強制的な位置におかれることになります。このような欠点は、補正技術を使用することにより INOZet® には存在しません。振り子の上面にセレーションがあるため、1セットのトップジョーでチャック径の全範囲でクランプすることができます(6個)。小径から大径まで、また内径把持から外径把持まで、1組のジョーで対応可能です。粗加工用のハードジョーと、二次加工用の旋盤加工されたソフトジョーの両方が使用できます。

HOW IT WORKS

The oscillating system allows compensation under the 6 jaws while still clamping centrally. The compensation allows all clamping points to contact the workpiece evenly and with the same force to the workpiece. Clamping systems with more than three clamping points without compensation leads to an over-determined clamping situation and particularly bring thinwalled workpieces into a forced position with a high proportion of deformation. This disadvantage does not exist with INOZet® by using the compensation technic. Due to the serration on the upper side of the pendulums, workpieces can be clamped in the entire chuck diameter range with one set of top jaws (6 pieces). Only a single set of jaws is required for small and large diameters as well as for internal and external clamping. The use of hard jaws for rough machining as well as the use of turned soft jaws for the second operation is equally possible.

The INOTop® clamping system can be used on almost any existing chuck from a diameter of 260 mm, no matter which jaw connection is used. Deformations caused by the clamping process are therefore no longer an issue.

圧力のないクランプ[®]

Clamping without pressure

カウンターベアリングによる 最適な丸み

INOTop[®] は、固定カウンターベアリングの原理により、最高の真円度を実現します。INOTop[®] を使用することで、特に薄肉部品は多角形を形成することなくクランプすることができます。

- ・ワーククランプは外側からの圧力なしに、中央に配置されます。
- ・ポリゴン形成なし
- ・完全な真円度の仕上がり
- ・可動式ジョーによる確実なクランプ力
- ・ローコスト
- ・高価で特別なクランプステーションは必要ありません

OPTIMAL ROUNDNESS DUE TO COUNTER BEARINGS

INOTop[®] produces best roundness results thanks to the fixed counter bearing principle. By using INOTop[®], thin-walled parts in particular can be clamped without polygon formation.

- Part is centred without pressure from outside for clamping
- Without polygon formation
- Perfect roundness results
- Defined clamping force by the moveable jaw
- Low-costs
- No expensive special clamping solutions needed

低変形クランプ

Low deformation clamping

圧力をかけないクランプ

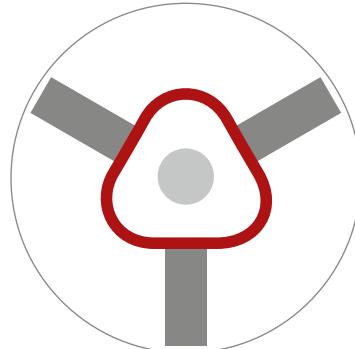

HWRの革新的なINOTop® ハイブリッドクランプジョーは、特に変形に敏感なパーツの旋削加工用に設計されました。従来のチャックにINOTop® を組付けることで、変形に敏感な部品はチャック機能により外側からの圧力はかけずにセンターを決め、内側からクランプします。そのため、INOTop® は不要なポリゴンの形成を防ぎます。従来は高価な特殊クランプを使用しなければ実現できなかった旋盤加工が、低成本で簡単に実現できるようになりました。HWRの革新的なINOTop® ハイブリッドクランプジョーにより、INOTop® は固定カウンターベアリング原理で最高の真円度を実現します。

CLAMPING WITHOUT PRESSURE

The innovative INOTop® hybrid clamping jaw by HWR was designed specifically for turning deformation-sensitive parts. In conventional chucks with INOTop®, components that are sensitive to deformation are simply centred without external pressure via the chuck function and then clamped from the inside. INOTop® thus prevents unwanted polygon formation. Turning results that were previously only possible with costly special clamping solutions can now be achieved at low cost quite easily. With the innovative INOTop® hybrid clamping jaws by HWR, INOTop® produces best roundness results thanks to the fixed counter bearing principle.

仕組み

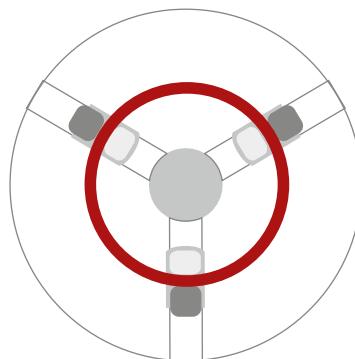

従来のクランプでは、クランプポイントを経由してワークにクランプ圧を伝えていました。しかし薄肉ワークの場合、この締め付け圧力はワークの形状に大きな影響を与え、その結果クランプによる変形が発生し、真円度に悪影響をおよぼしていました。

INOTop® を使用すると、チャックの機能はワークのセンタリングのみに使用され、クランプ処理自体には使用されません。つまり、ワークのセンタリングが完了した後は、それ以上ワークにクランプ圧が掛からない程度にクランプ圧を下げる事ができます。センタリング処理後、**INOTop®** のジョーにあるスピンドルを手動で操作することにより、移動するグリッパージョーはセンタリング(固定カウンターサポート)に対して内側から引っ張られます。このクランプはワークの形状に影響を与えません。

HOW IT WORKS

In conventional clamping, the clamping pressure is introduced into the workpiece via the clamping points. With thin-walled workpieces, this clamping pressure has a considerable influence on the geometry of the workpiece. The result is a deformation due to the clamping process, which has a negative effect on the roundness results.

When **INOTop®** is used, the function of the chuck is only used for centering the workpiece and not for the clamping process itself. This means that the clamping pressure can be reduced to such an extent that no further clamping pressure is applied to the workpiece after the workpiece has been centered. Following the centering process, the moving gripper jaw is now pulled from the inside against the centering, the fixed counter support, by manually actuating the spindle in the **INOTop®** jaw. The clamping has no influence on the workpiece geometry.
